AN ADVANCED MICROFILM APERTURE CARD SYSTEM  
SPECIALLY DESIGNED FOR MODERN ENGINEERING REPRODUCTION.

***REDUCE DRAWINGS*** up to 24" by 36" to an aperture card in only 40 seconds with the new 3M "2000" Processor-Camera. How? It photographs the drawing, processes the film and delivers a ready-to-use 3M aperture card, automatically. Cost? Pennies per card. Reduce drawings with changes . . . and you have a new original in seconds!

2

**GET A QUALITY COPY** up to 18" by 24" in seconds from the new 3M "333" Dry-Silver Printer. Load up to 200 aperture cards and get up to 25 prints per card automatically. Up to 2,800 copies in an eight-hour shift. New dry-silver print process delivers copies about twice as fast. Cost is very low. No messy chemicals. Minimum maintenance needed.

3

**LOOK UP DRAWINGS** instantly or get a working-size copy in seconds with the 3M "200" Reader-Printer. Just insert the aperture card and the image is enlarged onto an 18" by 24" screen. Push a button and get as many 18" by 24" copies as you need.

4

**MAKE COPIES** of aperture cards with the 3M "086" Copier. Produces up to 300 3M copy cards per hour. Aperture is "D" size. Cost is so low, cards need not be re-filed.

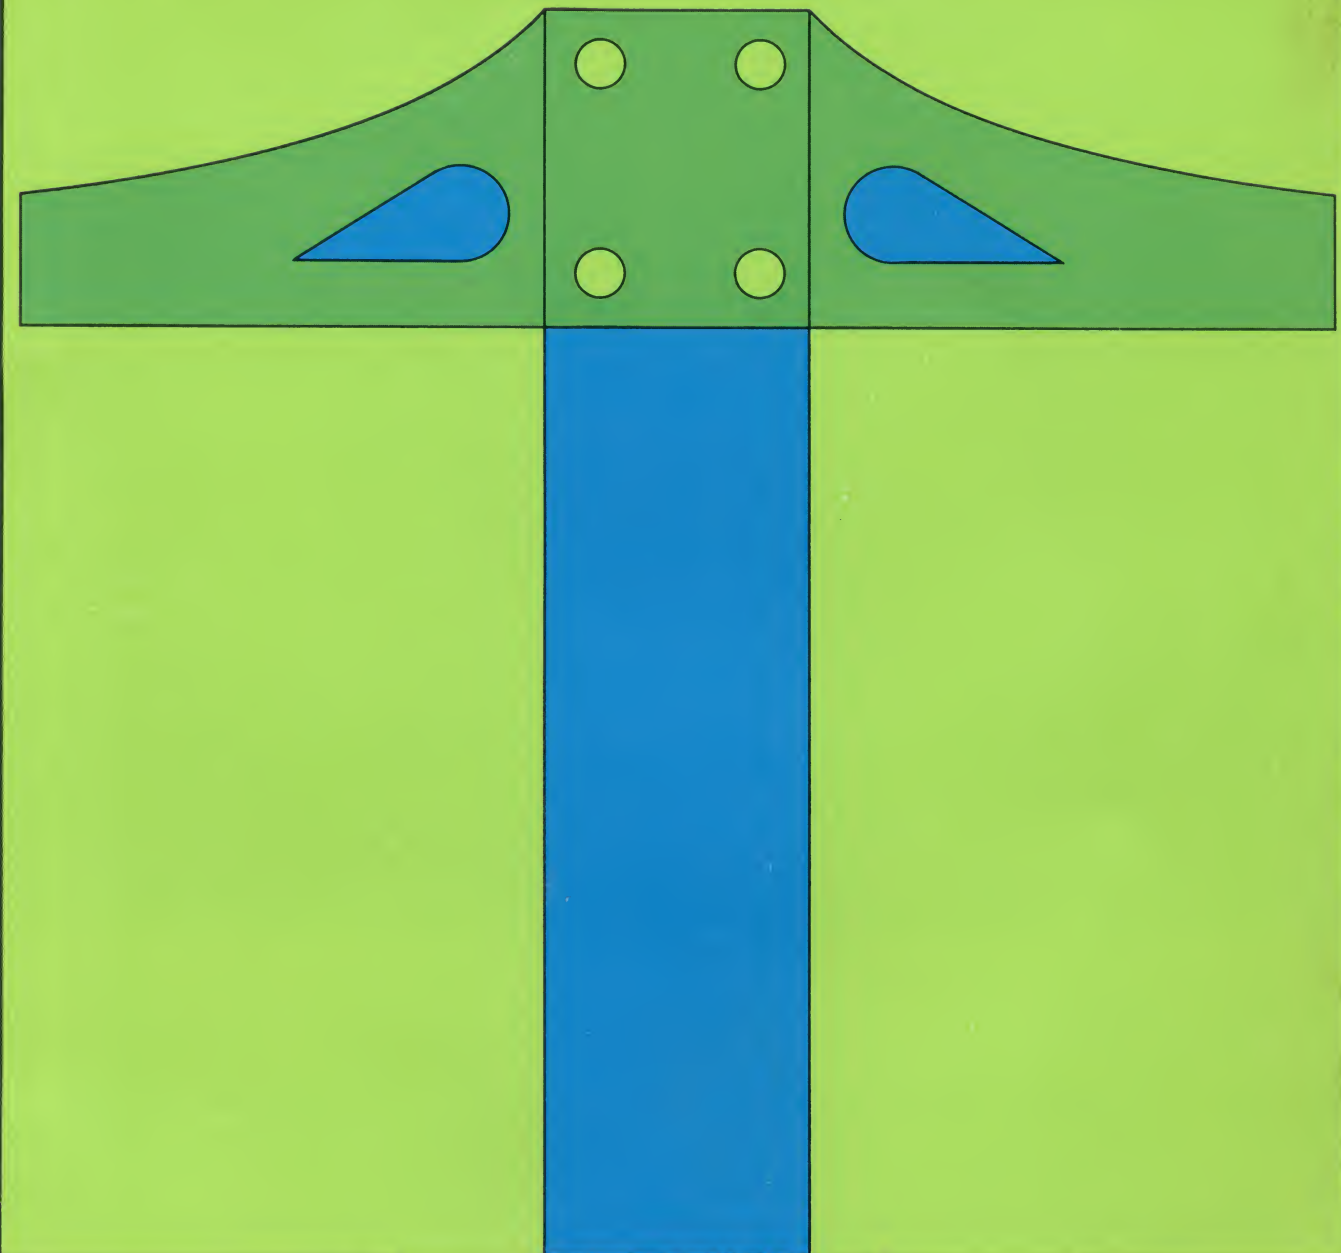

This was a 24 by 36 inch engineering drawing only 40 seconds ago. Now it is reduced to one small frame of microfilm in the 3M Aperture Card—the heart of 3M MICRO-SYSTEM I. This completely integrated microfilm system helps you solve your paper work problems by: ☐ Reducing file space up to 96%. ☐ Helping you find drawings in seconds instead of hours. ☐ Protecting drawings from wear and tear. ☐ Creating as many working-size copies as you need instantly. ☐ Protecting drawings from fire or loss by storing a duplicate file off the premises. ☐ Saving mailing costs by sending six microfilmed drawings for only five cents. Now see how 3M MICRO-SYSTEM I works by turning the page . . .
